(but not polar bears)

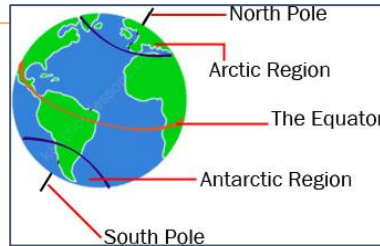

Y1 Geography

Cold places

Where are some cold places located?

The Arctic is found in the north.
Antarctica is found in the south.
The north pole is found in the Arctic.
The south pole is found in the Antarctic.

What is it like in a cold place?

The temperature is low. The weather can be icy and windy. There is often lots of snow during the winter. These storms are called blizzards. In the winter it can be dark even during the day.

What would you take with you to visit a cold place?

To stay warm I need to wear thick clothes with lots of layers. I would take warm boots and gloves too. To cope with the snow and the dark I would need a torch. To travel I would use skis or a sled. My sled could be pulled by dogs called huskies.

Key vocabulary

sled	Transport over snow or ice
polar	Cold lands around the north and south pole
blizzard	A powerful snowstorm
camouflage	Markings that help an animal blend in to its surroundings
blubber	A thick layer of fat under the skin
